

# *Practical Python*

A Python language tutorial,  
concepts and syntaxe in a practical  
and direct approach.

# What is Python

- ✓ Interpreted Language
- ✓ Clarity and Simplicity
- ✓ Blocks controlled by indentation
- ✓ Dynamic Typing
- ✓ Advanced Types
- ✓ Objected Oriented

# Why Python

- ✓ Simple concepts
- ✓ Simple syntaxe, clear and expressive
- ✓ Powerfull pre-defined types
- ✓ Interactive interpreter
- ✓ Several libraries
- ✓ C e C++ extensions
- ✓ Multi-platform
- ✓ Free Software

# Basic Python: Interpreter

- Using the interactive interpreter
  - ✓  $2 + 2$
  - ✓ *print*
  - ✓ Escape: *CTRL-D*
- Creating and executing code
  - ✓ *Unix-like: `#!/usr/bin/env python`*
  - ✓ *Win32: `HelloWorld.py`*

# Basic Python: Types, variables and values

- ✓ Numerics: `a = 2`
  - *int, float, bool, complex*
- ✓ Lists: `L = [1, 2, 3, 5, 8]`
- ✓ Strings: `S = "Hello World"`
- ✓ Tuples: `T = ("Romeo", "Juliet")`
- ✓ Dictionaries:  
`D = {"name": "Karl", "age": 28}`
- ✓ Set: `set([1, 2, 3])`
- ✓ *type(var)*

# Basic Python: Operators

- ✓ Aritimetics: +, -, /, \*, %, \*\*
- ✓ Bit-wise: &, |, <<, >>, ~
- ✓ Attribution: =, +=, -=, /=, \*\*=
- ✓ Conditional: ==, !=, <, >, <=, >=, in
- ✓ Logics: and, or, not, is
- ✓ Combining operators
- ✓ Replacing in strings

# Basic Python: Control Structures

- ✓ Conditional: `if a == b`
- ✓ Interactive loop:
  - ✓ `for l in L, for s in S, for k in D.keys()`
  - ✓ `break & continue`
  - ✓ `else`
- ✓ Conditional loop:
  - ✓ `while i < 5`
  - ✓ `break`
  - ✓ `else`

# Basic Python: Functions

- ✓ Syntax: `def foo(args)`
  - ✓ `def excuse(reason):`
- ✓ Default value
  - ✓ `def excuse(reason="sick"):`
- ✓ Arguments manipulation: `*args, **kw`
  - ✓ `def excuse(*args):`
  - ✓ `def excuse(**kw):`
- ✓ Local & Global scope

# Basic Python: Standards - I

- ✓ `range(a, b)`
- ✓ `len(L)`
- ✓ `round(f, p)`
- ✓ `chr(i) / ord(c) / unichr(i)`
- ✓ `min(a, b) / max(a, b) / abs(n)`
- ✓ `hex(n) / oct(n) / float(n) / int(f)`
- ✓ `list(args) / str(args)`

# Basic Python: Standards - II

- ✓ `open()`
  - ✓ `read()`
  - ✓ `readline()`
  - ✓ `readlines()`
  - ✓ `write()`
  - ✓ `seek()`
  - ✓ `close()`
- ✓ `raw_input()`

# Basic Python: Exceptions

- ✓ Concepts
  - ✓ What is an Exception
  - ✓ How to raise an Exception
  - ✓ tracebacks
- ✓ Manipulating Exceptions:
  - ✓ try/except
  - ✓ else

# Basic Python: *Import* and Docstrings

- ✓ *import os*
- ✓ PYTHONPATH
- ✓ *dir()* & *reload()*
  - ✓ *dir(os)*
- ✓ *help()* & *docstring*
  - ✓ *help(os)*
- ✓ Documentation Tools: *epydoc*

# Object Orientation (OO)

- ✓ Concepts
  - ✓ OO vs. Procedural Programming
  - ✓ Domain / Problem
- ✓ Objects, Classes e Instances
- ✓ Inheritance
  - ✓ Multiple Inheritance and `getattr()`
  - ✓ Class and Instance attributes
- ✓ Introspection, Reflection e Metadada

# Relevant Modules

- *sys*
- *time*
- *os*
- *string*
- *math*
- *optparser*
- *urllib*
- PIL
- OpenGL
- NumPy
- pyGTK
- DB-API
- Zope
- Twisted

# Thanks !
